Reset PC Password Remotely

1. Make sure you have registered for the SoM Password Management site. (See Registering for Password Management)
2. Change your password at the SOM Password Management Site.
   
   **Change your password before you move on to the next steps.**

3. Log on to the PC using your old password.
4. Make sure you have the VPN client installed. (See How to install VPN client)
5. Connect to the Cisco AnyConnect by clicking on the icon in the task bar.

6. In the field is blank please put in vpn.som.umaryland.edu. Should only need to do this once. Select “Connect”.
7. At the login box make sure you select “SOM” in the Group drop down and the enter your user name and new password you change it to. Click OK.

8. After reading the terms click Accept.

9. You are now connected to the VPN.

10. On your computer keyboard, press the <Ctrl+Alt+Delete> keys at the same time.

11. Select Lock this Computer.

12. At the lock screen enter your new password.

13. The new password should now be saved to the PC. You can always check to make sure it worked by restarting the PC.
