

THE MARYLAND EARLY INTERVENTION PROGRAM NETWORK

The Maryland Early Intervention Program (MEIP) Network comprises a group of providers participating in Maryland's statewide effort to provide better services for individuals at risk for or already experiencing early psychosis. **These clinics provide outpatient care to individuals who have experienced a first episode of psychosis within the past two years and their families. They utilize a team-based, multi-component intervention known as Coordinated Specialty Care (CSC), which integrates a suite of services including medication management, psychotherapy, case management, supported employment and education, and peer support.**

Maryland Psychiatric Research Center (MPRC) First Episode Clinic (FEC)

THE MARYLAND EARLY INTERVENTION PROGRAM NETWORK

The Maryland Early Intervention Program (MEIP) Network comprises a group of providers participating in Maryland's statewide effort to provide better services for individuals at risk for or already experiencing early psychosis. **The Clinical High-Risk for Psychosis (CHiRP) Program at the Strive for Wellness Clinic is a hybrid project that integrates research and clinical services to provide consultation, evaluation, medication, and therapy to individuals at clinical high risk for psychosis and their families.**

Through a client-centered and culturally-informed approach, the Strive for Wellness Clinic's CHiRP Program aims to:

- **Improve** social functioning and quality of life among clients;
- **Reduce** the severity of psychosis-risk symptoms and other mental health concerns;
- **Prevent or delay** progression to formal psychosis;
- **Curb** the burden of First Episode Psychosis (FEP) through stepped care; and
- **Increase** community awareness of clinical high risk (CHR) through outreach and specialized training.
